

| JavaScript | Node.js | HTML & CSS | agile teams | REACT | REST API | Git |

Full stack web developer with a property development and capital transactions background.

My love of electronics has provided a deep understanding of how to make bits and bytes dance to the required rhythm.

Using my technical capability and creativity I develop intuitive user experiences for the web.

Completing a certificate in full stack development from the University of Sydney to further advancing my current skills in developing responsive and accessible web designs using JavaScript, CSS, SQL, Python, API's and React.js.

I work well in agile development teams using Git and I respond well to either well articulated or high level briefs.

Professional Experience

Developer / Consultant

July 2019 – present

Watsonised Pty Ltd, Sydney NSW

A company I created for development and consultancy services. I've adapted the company to focus on web development. The company is in a launch state until I establish a sustainable client base

Services include refactoring existing code, developing JavaScript applications and database development.

Applications built / projects:

- ❖ Created the web shop space for a start-up fashion label, Two Face.
- ❖ Developed an internet of things (IoT) device with a number of room environment sensors that can upload via Wi-Fi the sensor readings to your website. Programming is Arduino (C language) and utilises a TFT touch screen and LiPo battery for power. Readings include total Volatile Organic Compounds, particulate matter concentrations and temperature and humidity. A lot of lessons learnt from this project as it covered industrial design, electronics and C programming.
- ❖ Coded a number of server side applications. Of mention, I recently developed an application I've named Noted. I've hosted it on Heroku. The application allows users to add notes and save them on the server side.

Regional Development Manager Woolworths Group, Sydney NSW

January 2012 – June 2019

Woolworths Group is the largest retail company in Australia by market capitalisation of approximately \$44.9 billion.

Part of the Woolworths corporate property team, responsible for the strategic expansion of their property business in NSW. Responsibilities included identifying sites, negotiating their purchase, negotiating supermarket leases, preparing Woolworths' board papers, and developing sites to expand Woolworths' businesses.

Achievements:

- ❖ Developed and executed the strategy including receiving board approval to dispose of Woolworths' surplus property portfolio of approximately 130 properties. Transacted over \$200M in property at a profit on the books of nearly \$20M, and in 2 years transacted most of the portfolio with 15 properties remaining;
- ❖ Acquired and developed approximately 20 properties for neighbourhood centres anchored by Woolworths businesses.
- ❖ Created and chaired a workgroup for the transition of Woolworths Corporate Property from Microsoft to Google platform.

Education

Certificate in full stack development, University of Sydney - graduating February 2022.

Bachelor of Building Construction Management (1st class honors) from University of N.S.W.

Tools

Git, GitHub, GitLab, JavaScript, jQuery, Moment, API, Jest, Node.js, HTML, CSS, SASS, MySQL, Python, C, React, Mocha, Inkscape, Arduino.

Referees

- ❖ Provided on request.
